Table of Contents

- [Expected Return by Sector](#)
- [Sector Return Comparison](#)
- [Top Companies by Market Capitalization](#)
- [Price Target Convergence Over Time](#)
- [Market Capitalization Distribution by Exchange](#)
- [Expected Return vs. Risk-Adjusted Return](#)
- [Efficient Frontier Optimization](#)
- [Kelly Criterion Position Sizing](#)
- [Monte Carlo Return Distribution Simulation](#)
- [Probability of Positive Return by Industry](#)
- [Top Industries by Average Return](#)
- [Expected Return by Industry](#)
- [Signal Strength by Country and Exchange](#)
- [Reward-to-CVaR Ratio by Exchange](#)

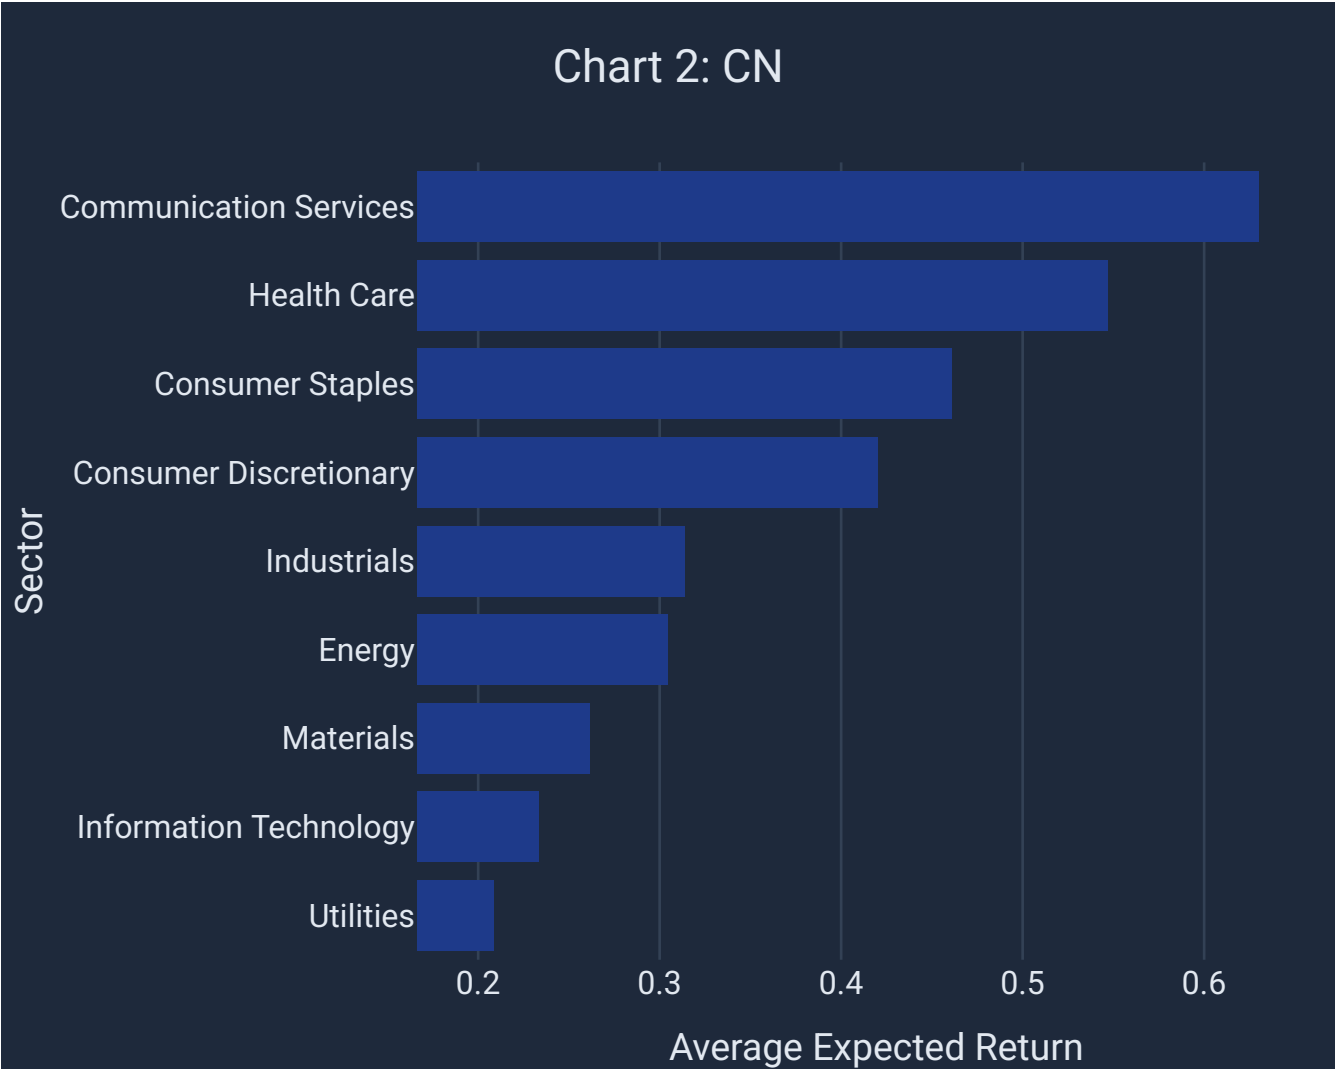

Average expected return metrics grouped by sector with configurable aggregation method

Compare expected returns of sectors across different countries

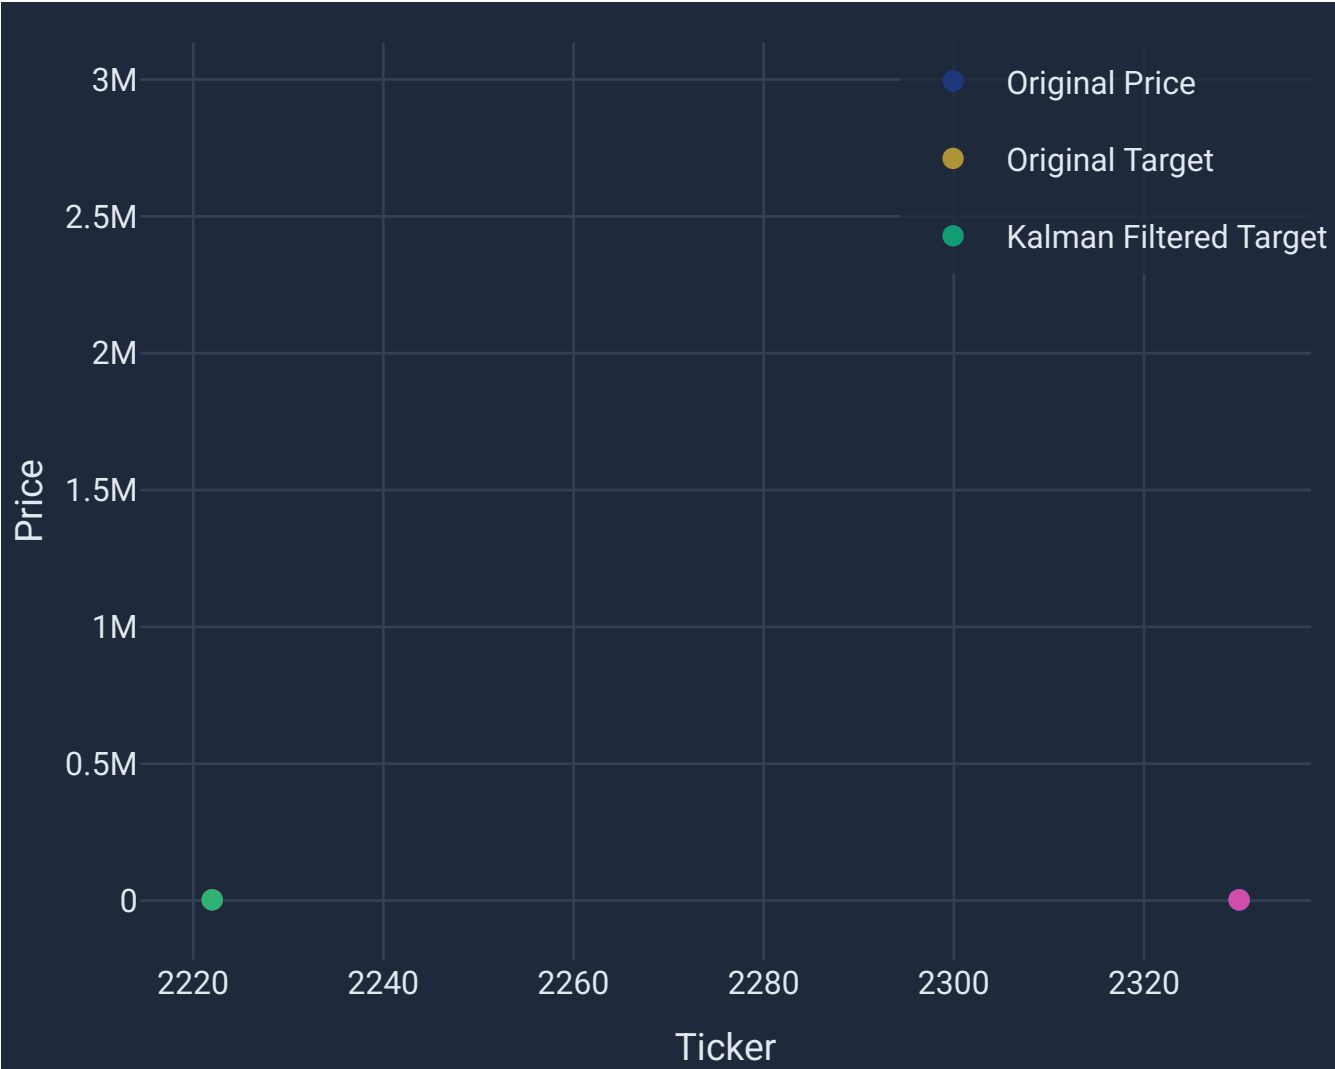

Displays the top N companies ranked by market capitalization

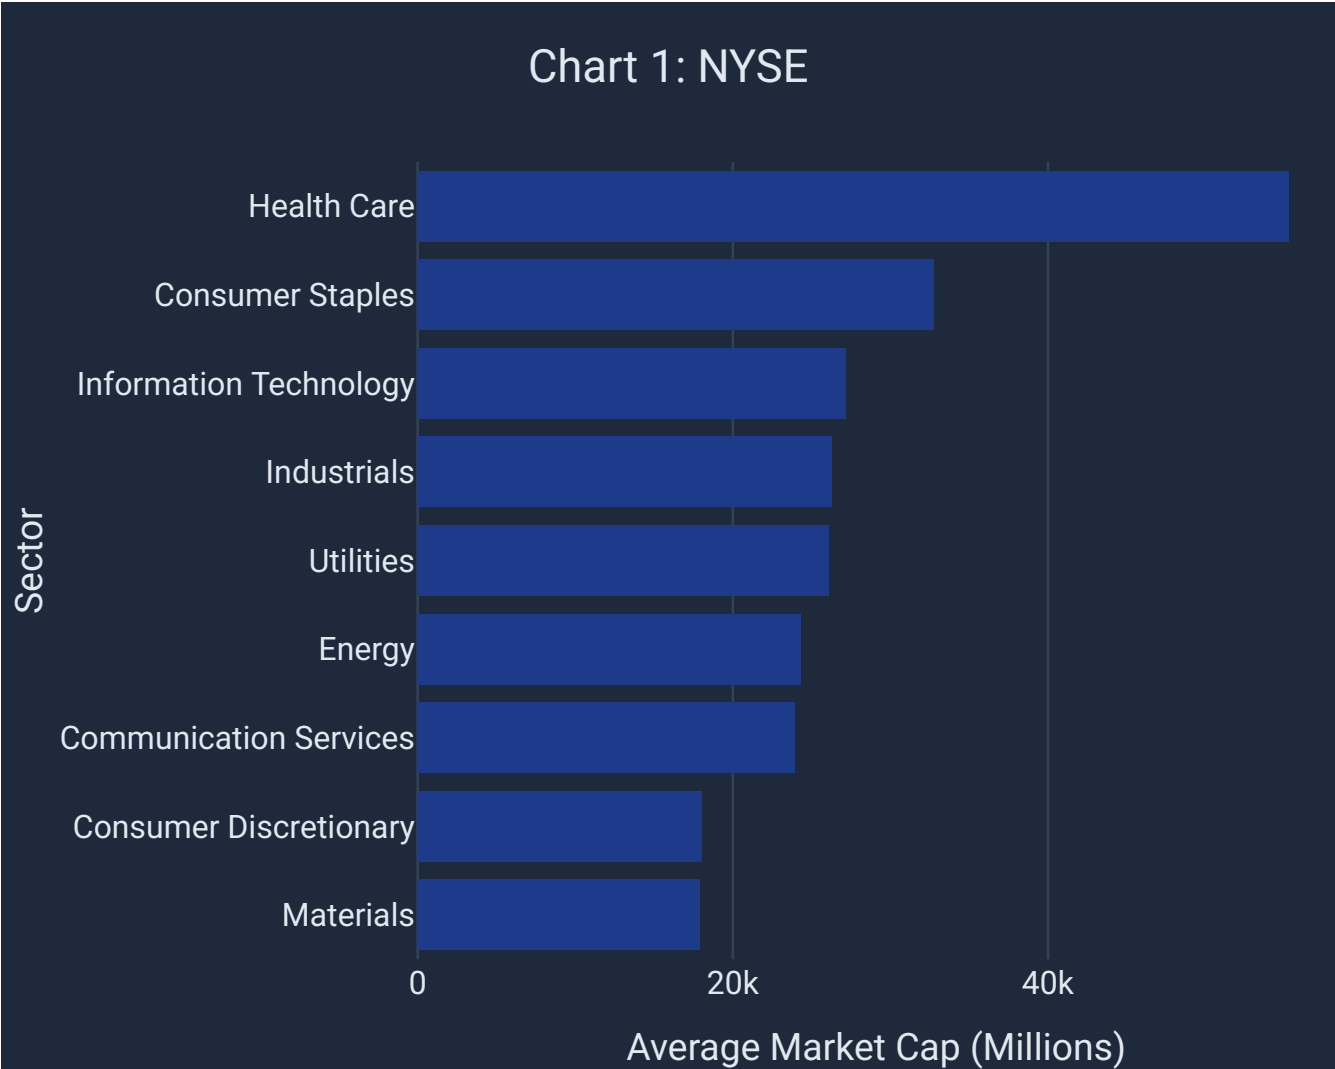

Comparison of original price, original target, and Kalman-filtered price targets by ticker

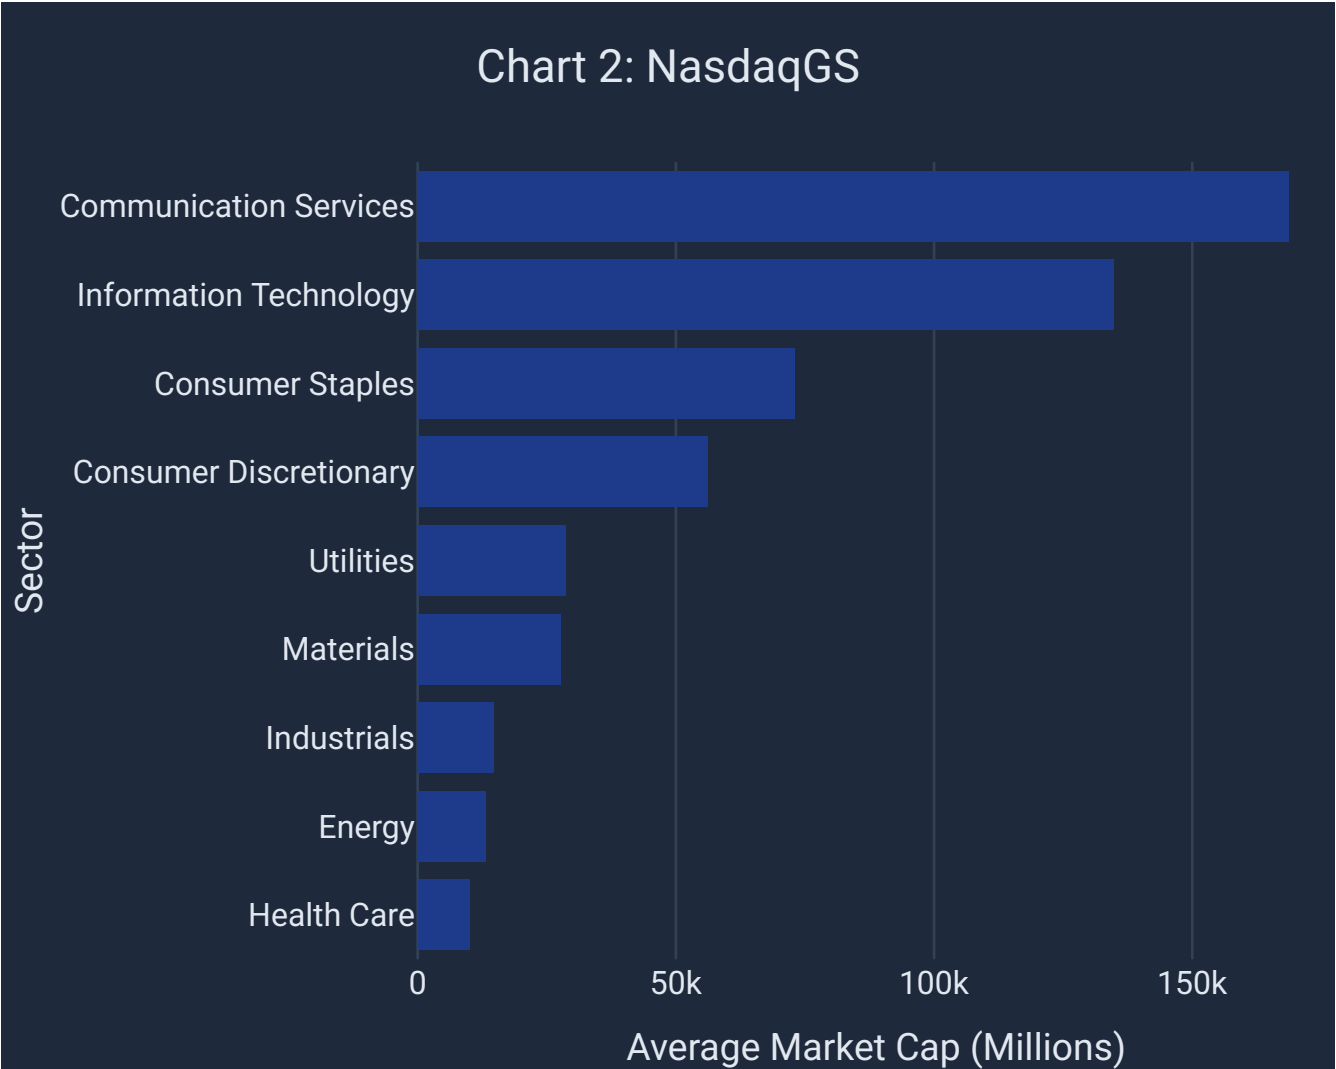

Compare average market capitalization across sectors for different exchanges

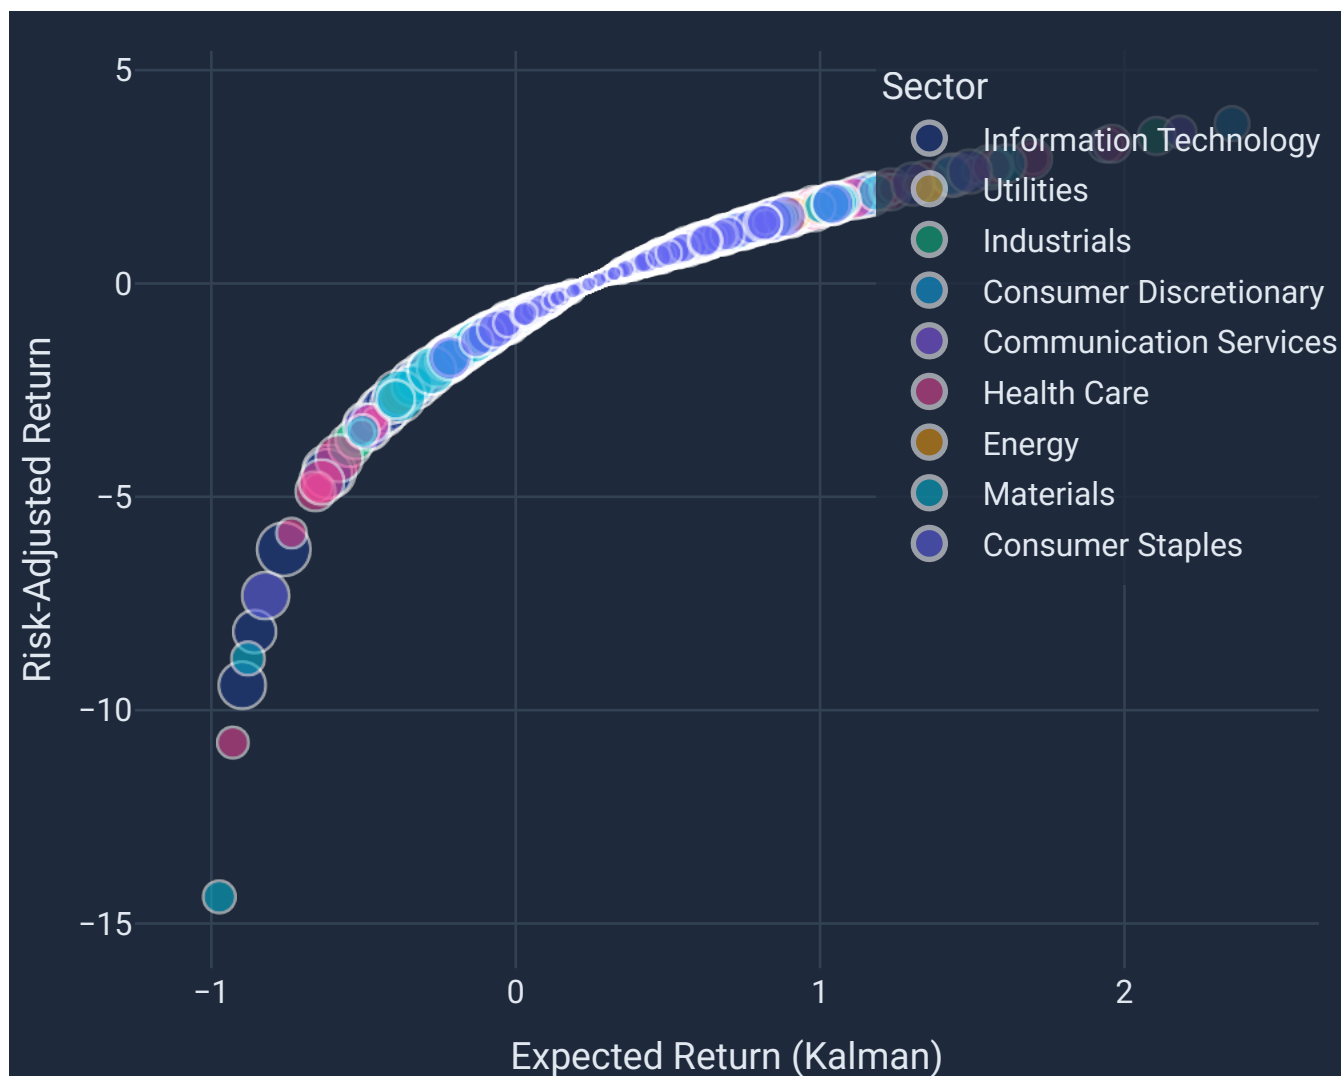

Scatter plot showing the relationship between expected return (Kalman-filtered) and risk-adjusted return, with optional coloring by sector/industry/country and sizing by signal strength or market cap.

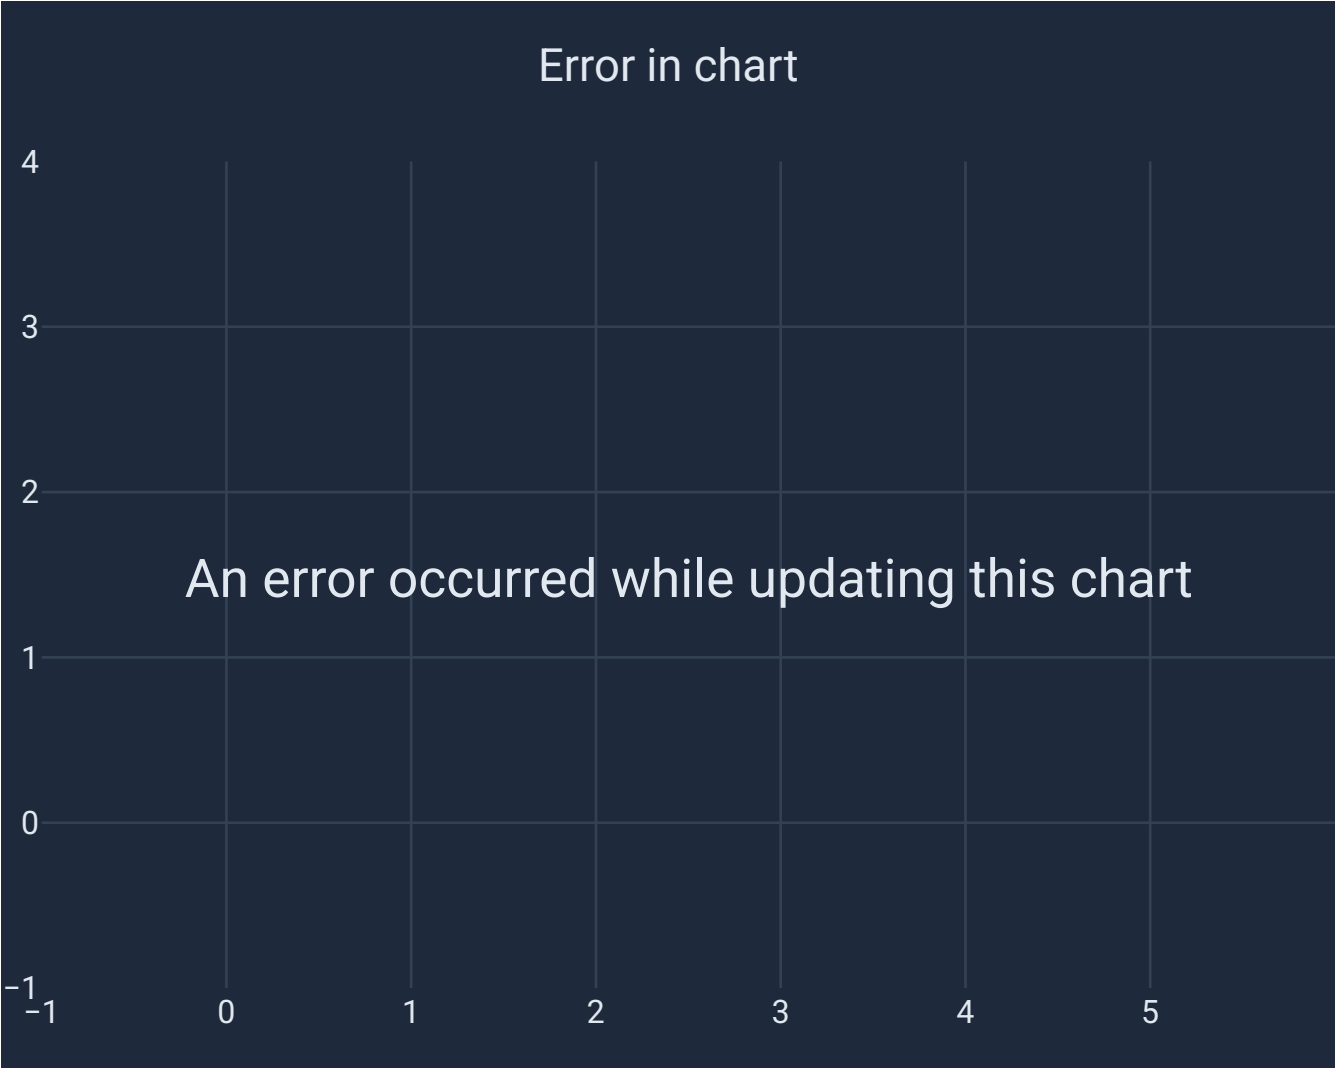

Visualizes optimal risk-return tradeoff for portfolio combinations using mean-variance optimization. Adjust parameters to find portfolios that maximize return for each level of risk.

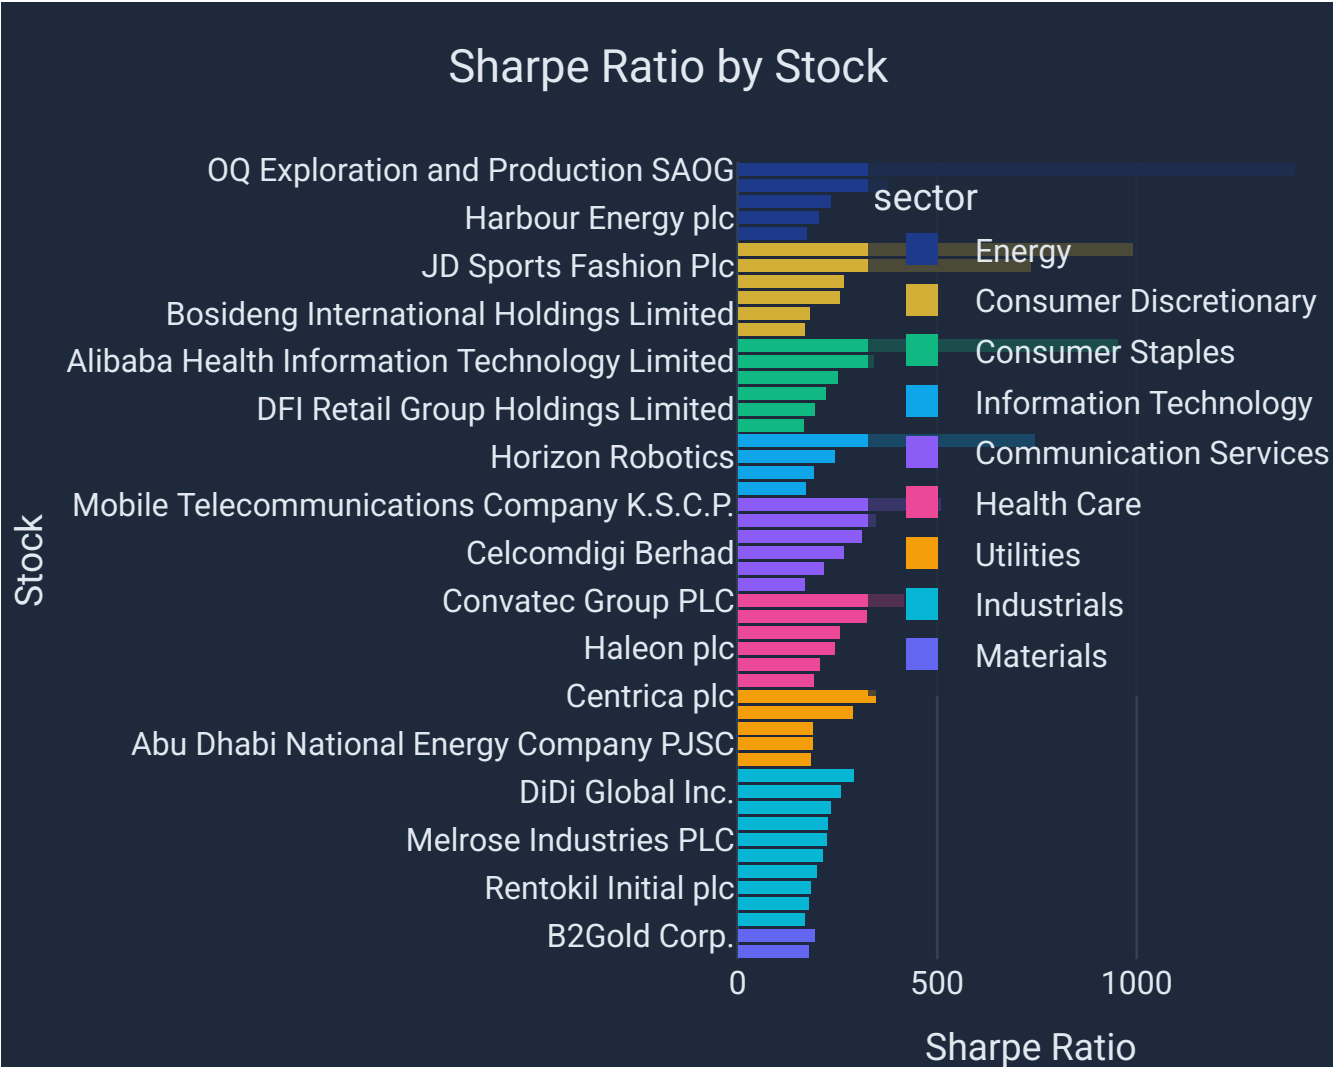

Optimal portfolio allocation using Kelly criterion to maximize long-term growth while managing risk. Kelly fraction shows the percentage of portfolio to allocate to each stock.

Simulates thousands of possible future return scenarios using Monte Carlo methods based on each stock's expected return and volatility. View the probability distribution of outcomes to understand the range of potential returns and downside risks.

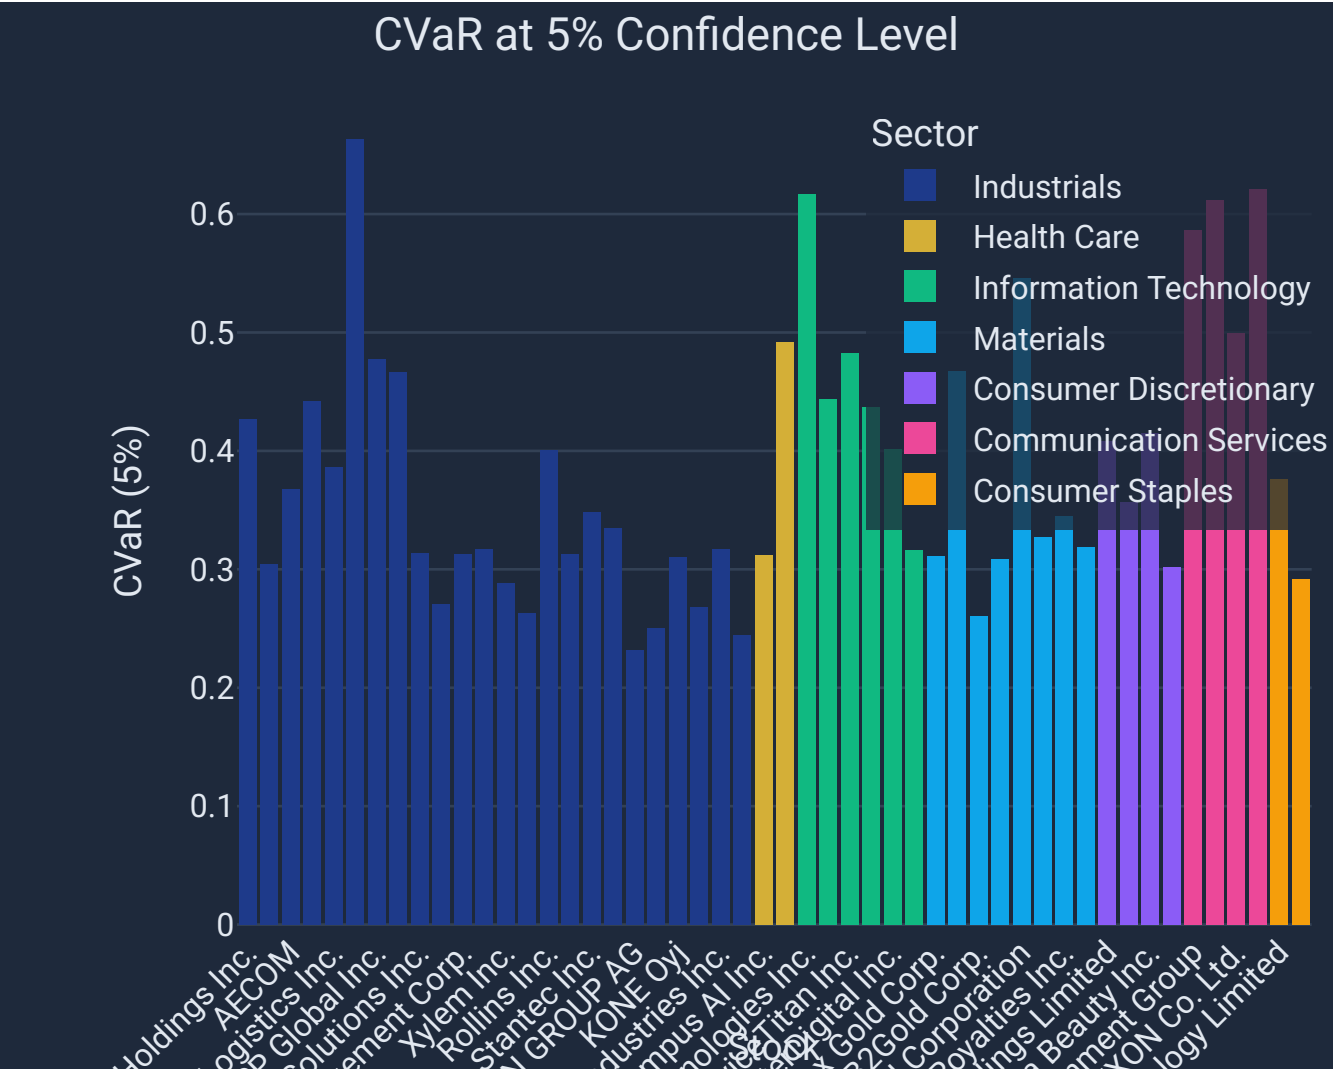

Treemap showing the probability of positive return across industries and sectors, with color indicating expected return metrics.

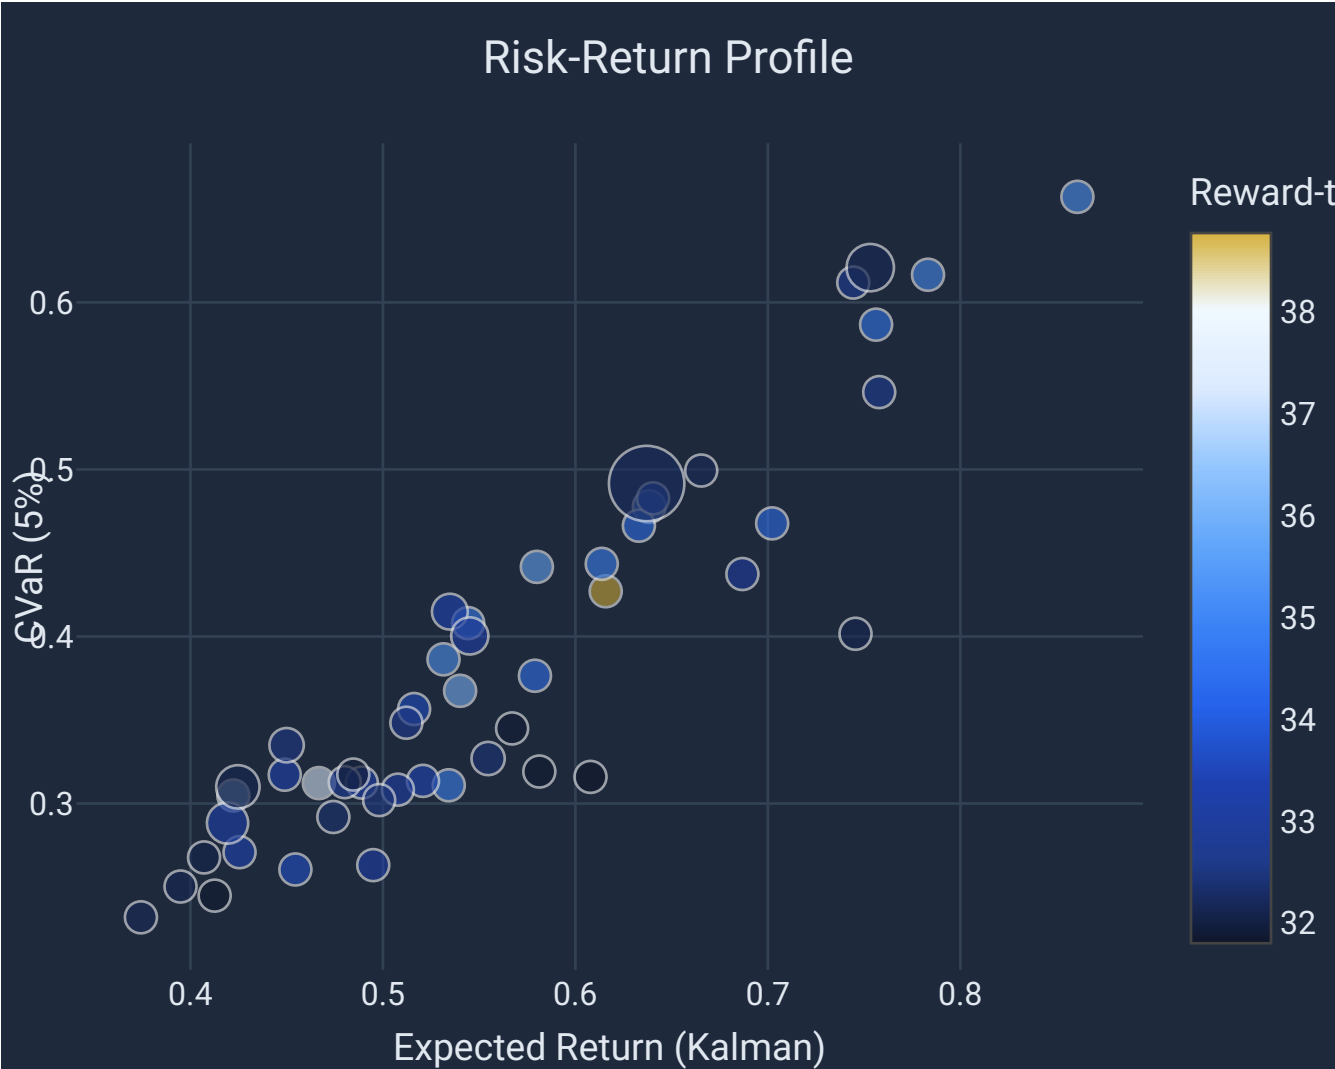

Displays the top N industries ranked by average expected return, with options to adjust the number of industries and select different return metrics.

Pivot table showing median expected returns across sectors and industries with conditional formatting

Pivot table showing mean signal strength across countries and exchanges with conditional formatting

Average reward-to-CVaR ratio across exchanges, showing risk-adjusted return metrics for quantitative investment analysis
